Propagation Watch

[Forecasts based on 54-day data.] The bands should be good through the end of the month, especially 160-40 meters. Two problems might put a damper on otherwise fine propagation: a solar disturbance around the 18th, and Stratwarm alerts.

The solar region that is expected back around the 18th has been chopping up the bands for several months now, an unusually long time for this point in the sunspot cycle. Maybe we'll be lucky this time, and it will have lost much of its energy.

The Stratwarm alert (heard on WWV at 18 minutes after the hour) signifies higher absorption and slightly disturbed conditions in lower latitudes, and on higher frequencies. The low bands and the polar paths often escape unscathed. This leads to below normal conditions on 20-10 meters, while the low bands are jumping with long path openings and good signals on the polar path. Stratwarm alerts tend to be quite persistent, lasting days at a time. So head lower in frequency to 160-40 to escape the effects.

Low Band News

The low bands continue to be where the action is these weeks. If you have not been on 160-40 in the last three weeks, you have missed the best propagation so far this season.

Several active 80 meter DXers have commented on the return of the 80-meter long path at local sunrise. This path is only open when the solar flux stays high enough to allow lingering traces of ionization throughout the night, ie. at sunspot maximums. East Coast stations report UM8s UA9s and other Asians in the 12-1300Z range. West Coasters enjoy the same phenomenon around 15-1600Z.

The other good time to work DX on 80 and 160 is at the sunrise of the DX station. As the terminator moves across Europe, 05-0800Z is a time to hunt for EU on 160. And with the 80 meter long path open, watch sunrise times in the Far East, 2300-0100Z, for short, but strong, band openings.

The local sunset terminator has not been as productive lately. However, some 160 meter enthusiasts recommend looking for Hawaii at their sunset: 0400Z.

DXCC Golden Jubilee Times 2

The DX Bulletin estimates that 280-285 DXCC countries were legitimately on the air in 1987. Among those readers who caught most of these possible countries are K6IR with 268 on SSB, K7ABV with 245, W6GO with 249, NW6P with 237, KK4LM with 232, and N1CIX with 230.

Among readers working more than 200 DXCC countries in 1987 are NX0I with 215, K9PSN with 203, LU1HGN with 208, K0SR with 200, K4II with 217, 5N0WRE with 200, W7OF with 220, W1CYB with 200 on SSB, and W4WNB with 201. WB3AVN worked 105 countries on 160 meters in 1987, and W1NG also topped 100 on Top Band in '87.

Congratulations to these fine DX efforts!
